crack Dcu 2020 setup free downloadSaturday, January 12, 2012 "I love fun..." "I love fun. I love it so much that I want everyone to have fun too." We never know when we are going to get an opportunity to have fun. We just have to make the most of every moment that we get. While I am working on the Autodesk Academy we are participating in a workshop where we have to design our own "Futuristic Fantasy" type of space ship. I have a busy week coming up, so I am going to try to squeeze this post in between lots of other things. We have to design a futuristic space ship that will have everything we need to be on the first space mission. It needs to be able to carry 3 passengers, carry food and water for 7 days, and allow for a 100 km vertical climb.

This is where I am having the most fun. I love designing this type of ship. My futuristic fantasy space ship is really sleek. It looks like it has all the right things that we need. With a little effort and creativity, I think we can make the necessary modifications that will allow for our ship to work as described in the Autodesk Academy. I am thinking about the interior of the ship. I have to think about what kind of space ship we are designing and the kind of equipment that we will need to keep everyone's food and water safely. We have the fundamental needs of survival: What kind of containers will we need to keep our food and water safe? How will we light the ship? What kind of controls will we need to navigate? What kind of seating will we need? We have to be really creative with this design. I am trying to think about what we can use on Earth that we can also use on a spacecraft. I found some cool retro space ship images on Google Images. I also want to think about how we are going to help people live and work on the space ship. I am super excited about this! I love designing something that will help others. I am looking forward to how the Autodesk Academy will help me in my quest to design a futuristic space ship that will get us on our first space mission. 7 comments: That looks like an awesome ship! Thanks for sharing your work! I just love creative things and know that 82157476af
